

Anticipated Schedule:

4 years for preliminary design (PE 2014)

Estimated Funding Needed:

\$8,000,000 (PE only)

Description:

Project includes preliminary design of managed lanes along GA 400 between I-285 and McFarland Parkway. In this case, managed lanes means high occupancy toll lanes. Passenger vehicles not meeting an occupancy requirement can use these lanes by paying a variable toll. Meanwhile, transit vehicles and passenger vehicles meeting the occupancy requirement can use the lanes for free. Two managed lanes in each direction (four total) are proposed between I-285 and Holcomb Bridge Road and one managed lane in each direction (two total) is proposed between Holcomb Bridge Road and McFarland Parkway. Managed lanes are designed to provide a reliable trip option for those that carpool, use a vanpool, take transit, or wish to pay to use the lane.

Note: Final project descriptions are subject to the development process and environmental clearances.

D. GA 400 Managed Lanes Study, I-285 to McFarland Pkwy
